DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claims 41-45 and 52 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 41 limits "a second finishing unit tiltable about a second axis that is substantially parallel to the central axis of the finishing machine, and a third finishing unit tiltable about a third axis, wherein the second axis and the third axis are configured to form an acute angle". This is new matter. While applicant has disclosed an embodiment where the second and third axes form an acute angle, there is no disclosure that the second angle is parallel with the central axis of the machine. The embodiment disclosed has both axes at an angle to the central axis of the machine. Claim 52 limits the frequency converters to providing power to the propelling unit and finishing units, however, as disclosed, see page 14, the converters do not supply power as claimed, but individually control the speed of the drive wheels 200 and the finishing units. (note that in line 24, 200 refers to drive wheels, where it should refer to drive motor).
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Application/Control Number: 10/589,070

Art Unit: 3727

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Page 3

4. Claim 52 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 52 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: the relationship between the engine and generator with the frequency converters. As disclosed, the converters do not supply power to the finishing units and propelling unit, the converters control the speed of the drive wheels and finishing units. As such, the scope of this claim cannot be readily determined.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 22-40, 46-51 and 53 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Palushi, 7,261,623. '623 discloses the claimed invention. Please refer to figures 29-34, and column 12, lines 5 through column 14, lines 51. Note that the finishing units have been defined has having motor driven finishing elements in the form

Application/Control Number: 10/589,070 Page 4

Art Unit: 3727

of discs, see figure 3. Regarding claim 53, '623 discloses at least one drive wheel and at least one pivot (caster) wheel, see column 12, lines 12-22 and lines 66-67. Caster is defined as "any of a set of wheels or rotating balls mounted in a swivel frame and used for the support and movement of furniture, trucks, and portable equipment".

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 41-43, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palushi, 7,261,623. Regarding claim 41, '623 discloses the claimed invention does not disclose the claimed orientation of the third unit. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided '623 with a third unit positioned such that it is tiltable about an axis that forms an acute angle with the second unit, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70. Here, one of ordinary skill would have found it obvious to have positioned the second and third units as claimed, for the predictable result of narrowing the footprint of the apparatus.
- 9. Claims 29 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palushi, 7,261,623 in view of Legatt, 6,450,867. '623 does not disclose each of the

Art Unit: 3727

finishing units provided with an actuating mechanism for adjusting a degree of tilting of the unit relative to the frame. In a similar apparatus, '867 teaches that it is old and well known to provide a finishing unit of a surface treating device with an actuating mechanism for adjusting a degree of tilting of the unit relative to the frame of the device. It would have been obvious to one of ordinary skill in the art to have provided '623 with the actuator taught by '867, column 7, lines 9 through column 8, lines 20, for the predictable result of controlling the degree of tilting of the units.

Page 5

10. Claim 52 is rejected under 35 U.S.C. 103(a) as being unpatentable over Palushi, 7,261,623 in view of Brogden, 5,070,656 and Langer, 5,581,863. '623 does not disclose that the finishing tool comprises an internal combustion engine, a generator, and frequency converters to supply power to the propelling units and finishing units. In a similar apparatus, '656, teaches driving a finishing unit with a fork lift truck that is powered by an internal combustion engine and a generator to provide electric power to drive the truck, and the finishing unit, see column 2, lines 40 through column 3, lines 36, allowing the production of electrical energy. It would have been obvious to one of ordinary skill in the art to have provided '623 with the engine and generator of '656, for the predictable result of driving the finishing units and propelling unit. Regarding the use of frequency converters, '623 does not disclose the use of such to power the finishing or propelling units. '863, in a device for driving a plurality of individual machining devices, teaches that it is old and well known to use frequency converters with an electrical generator to control the speed of each individual motor. It would have been obvious to one of ordinary skill in the art to have provided '623 with the frequency

converters taught by '863, column 2, lines 10-29 for the predictable result of controlling individual motors simultaneously.

11. Claim 54 is rejected under 35 U.S.C. 103(a) as being unpatentable over Palushi, 7,261,623 in view of Beckett et al, 5,643,047. '623 does not disclose the use of an image-generating device operably connected to the machine for inspecting the work surface in real time. Please note that the term "image-generating device" is extremely broad in scope. As such, in a similar device, '047, column 3, lines 16-26, teaches the use of an image-generating device in the form of a plotting device that with the controlling computer provide real time graphing of the work surface as compared to a preprogrammed surface contour. It would have been obvious to one of ordinary skill in the art to have provided '623 with the image-generating device of '047, for the predictable result of monitoring the surface in real time.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other similar devices are cited of interest.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maurina Rachuba whose telephone number is 571 272 4493. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Monica Carter can be reached on 571 272 4475. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
